

REACT JS ASSIGNMENT 2

SIR YASIR ALI LASHARI

1. Build a component that displays a list of students (name, age, class) using `.map()`.
2. Create a product list component with at least 5 products and render them using list rendering.
3. Create a button click event that changes the text on the screen when clicked.
4. Build an input field that displays real-time typed text below it using state.
5. Create a component that shows a message only if the user has unread notifications using conditional rendering.
6. Create a simple login UI that shows either “Login Form” or “Welcome User” based on login state.
7. Build a list of fruits and display them in a styled card layout using external CSS.
8. Create a counter application with increment and decrement buttons using React events.
9. Create a component that renders a list of employees and shows “No Employees Found” if the list is empty.
