

WEATHER_APP USING OPEN WEATHER FREE API

TITANS-SUKKUR SIR_YASIR ALI_LASHARI

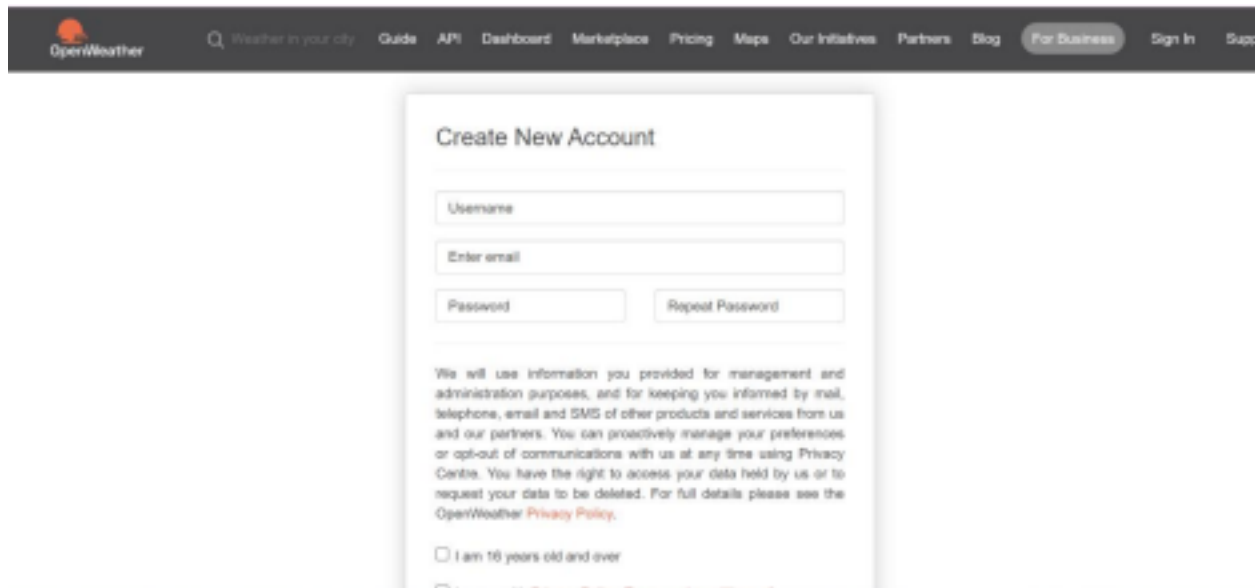

STEP 1:- Search openweather

STEP 2:- CLICK ON LOGIN

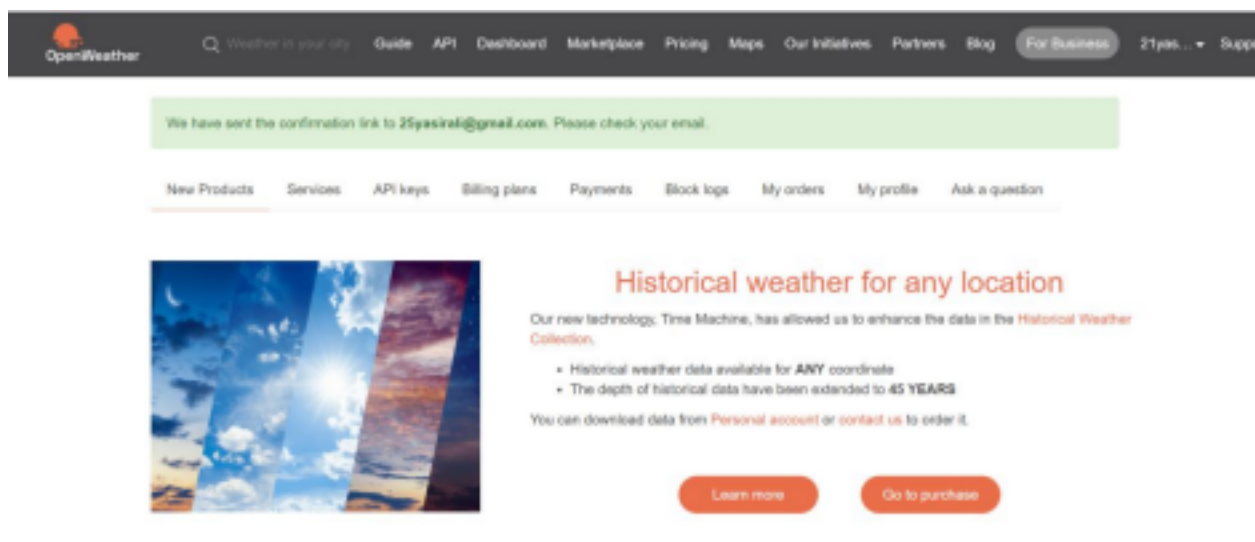

STEP 3:- Create account if you are new otherwise login directly

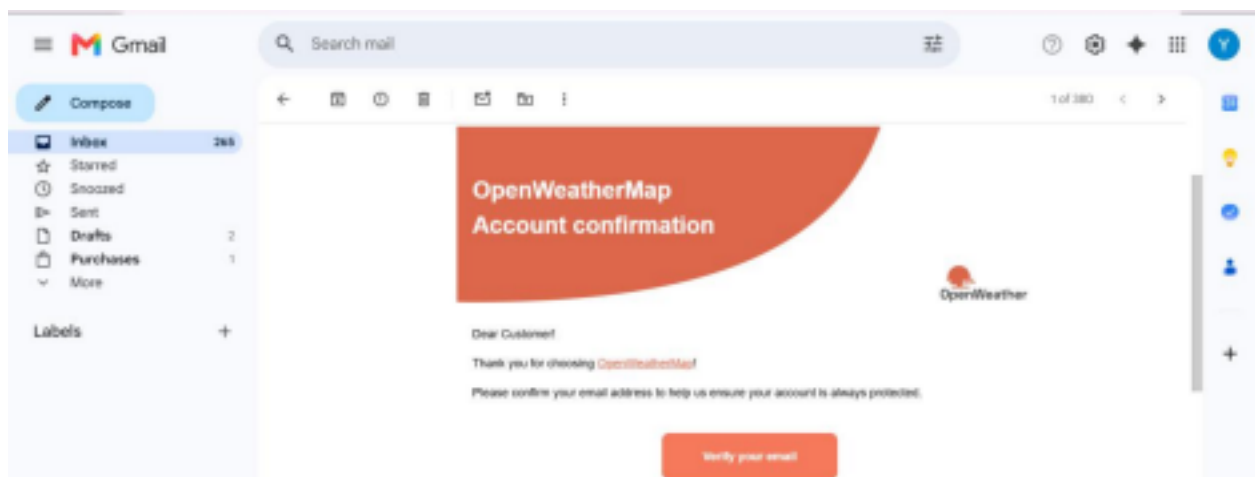

The image shows the 'Create New Account' form on the OpenWeather website. The form includes input fields for Username, Email, Password, and Repeat Password. Below the form, there is a privacy policy statement and two checkboxes: 'I am 16 years old and over' and 'I agree with OpenWeather Policy Terms and conditions of'.

Step 4:- Create account Done

The image shows the OpenWeatherMap Account confirmation page. It features a green banner with the message: 'We have sent the confirmation link to 25yasin@icloud.com. Please check your email.' Below the banner, there is a navigation bar with links: New Products, Services, API keys, Billing plans, Payments, Block logs, My orders, My profile, and Ask a question. The main content area has a large image of a sunset and the heading 'Historical weather for any location'. It describes the 'Time Machine' technology and lists features: 'Historical weather data available for ANY coordinate' and 'The depth of historical data have been extended to 45 YEARS'. It also mentions that data can be downloaded from a 'Personal account' or by contacting them. There are two buttons: 'Learn more' and 'Go to purchase'.

Step 5:- Verify Your EMAIL

The image shows a Gmail interface with an email from OpenWeatherMap. The email subject is 'OpenWeatherMap Account confirmation'. The body of the email says: 'Dear Customer! Thank you for choosing OpenWeatherMap! Please confirm your email address to help us ensure your account is always protected.' There is a button labeled 'Verify your email'.

STEP 6:- Email verified successfully now click on APIkeys option

STEP 9:- copy this API call link that have city name and Api key

STEP 10:- In Above link it is an example of API call so we should change these things

```
Example from Website
https://api.openweathermap.org/data/2.5/weather?q={city name}&appid={API key}

just Add backticks and Change city name to city and API key to apiKey with $ sign and also add &units=metric`
otherwise ye kelvin main dega output

`https://api.openweathermap.org/data/2.5/weather?q=${city}&appid=${apiKey}&units=metric`
```

STEP 11:- create .env file in your Project and it should be in root not inside src

VITE_WEATHER_API_KEY=YOUR_API_KEY

Note:- Variable name must start with VITE keyword

STEP 12:- Code of Weather App with designing

```
import { useState } from "react";
```

```
function App() {
```

```

const [city, setCity] = useState("");
const [weather, setWeather] = useState(null);

const getWeather = async () => {
  const apiKey = import.meta.env.VITE_WEATHER_API_KEY;
  const response = await fetch(
    `https://api.openweathermap.org/data/2.5/weather?q=${city}&appid=${apiKey}&units=metric`
  );

  const data = await response.json();

  setWeather(data);
};

return (
  <div>
    <h1>Weather App</h1>

    <input
      type="text"
      placeholder="Enter city"
      value={city}
      onChange={(e) => setCity(e.target.value)}
    />

    <button onClick={getWeather}>Search</button>

    {weather && weather.main && (
      <div>
        <h2>{weather.name}</h2>
        <p>Temperature: {weather.main.temp}°C</p>
        <p>Humidity: {weather.main.humidity}%</p>
        <p>Weather: {weather.weather[0].main}</p>
      </div>
    )}
  </div>
);
}

export default App;

```

STEP 13:- OUTPUT

Weather App

Sukkur

Temperature: 35.86°C

Humidity: 37%

Weather: Clear
